FINAL REPORT OF THE SURGEON OF THE BOARD OF ENROLLMENT OF THE 12 TH DISTRICT OF OHIO.....	76
REPORT OF MEDICAL BRANCH [BY COL. J. H. BAXTER, CHIEF MEDICAL OFFICER].....	238

NOTE.— These reports are taken from "Message and Documents,
War Department, Part 3. 1865- '66"

Document No. 13.

FINAL REPORT OF THE SURGEON OF THE BOARD OF ENROLMENT OF THE 12TH DISTRICT OF OHIO, CIRCLEVILLE, JUNE 15, 1865.

PROVOST MARSHAL'S OFFICE, 12TH DISTRICT OF OHIO,

Circleville, June 15, 1865.

GENERAL: In obedience to instructions, I have the honor to submit the following report:

My experience as surgeon of the board of enrolment of the 12th district of Ohio dates from May 10, 1864.

The first drafting done in this district was commenced on the 12th of May, 1864, to fill a deficiency of six hundred and fifty-four men under the call of March 14, 1864.

Since the date of this connexion with the department, under the several calls of March, July, and November, 1864, the following number of physical examinations of recruits, substitutes, drafted men, and enrolled men have been made, and the results of which are shown by tables Nos. 1, 2, 3, 4, 5, 6, 7, and 8.

Table No. 1 shows the total number physically examined; the total number actually appearing before the board; the total number actually and constructively examined; and the ratio rejected and exempted for all causes, and for physical disability of each class respectively.

Table No. 2 shows the number of each class and total examined; the number of each class, total number and the ratio rejected and exempted per 1,000 examined under each section of paragraph 85; the number and ratio rejected and exempted for other causes; total number and ratio rejected and exempted.

Table No. 3 shows the nativity, average measurements of the chest, average heights and ages of recruits, substitutes, and drafted men examined from July 4, 1864, to April 30, 1865.

Table No. 4 shows the number of recruits and substitutes examined from July 4, 1864, to April 30, 1865; the average measurements of the chest, and average heights and ages of those accepted, as compared with the rejected; the number, average measurements of the chest, heights, and ages of the natives of Ohio accepted and rejected, as compared with the natives of other States and countries; and the average measurements of the chest, heights, and ages of the total number examined.

Table No. 5 shows the total number physically examined, the number exempted for hernia and its classification, and the ratio rejected per 1,000 physically examined of recruits and substitutes, drafted and enrolled men.

Table No. 6 shows the number of recruits and substitutes, natives of Ohio, of less age than twenty years; the number, twenty and not exceeding forty-five years of age, and the ratio rejected per 1,000 examined of each; the number of drafted men examined of forty and less than forty-five; the number under forty years of age, and the ratio exempted per 1,000 examined of each class.

Table No. 7 shows the colored recruits and substitutes examined from July 4, 1864, to April 30, 1865; the number rejected; causes of rejection, and ratio rejected per 1,000 examined.

Table No. 8 shows the number examined, the average measurements of the chest, height, and age of colored Americans and white Americans; colored aliens and white aliens; total number examined, and average measurements of the chest, height, and age.

In the presentation of these observations, the classification and order of disability as given in paragraph 85, Revised Regulations, Provost Marshal General's bureau, for drafted men, has been adopted for recruits and substitutes; in doing so, it is understood to embrace the diseases, but not in that specific degree as applied to drafted men.

The ratio of rejections of substitutes has been much greater than recruits, or the exemptions of drafted men. A large per cent. of this class of applicants for the service has been composed of bounty-jumpers, convicts, alien thieves, deserters, half starved-paupers, broken-down libertines and drunkards—persons having no principle in themselves or interest in the government, and who have been spirited from place to place as mere chattels in the hands of speculators and unprincipled brokers; while recruits are mostly from the young and resident class of laboring population, and have to some extent been selected by a partial examination of the recruiting officer previous to enlistment.

The ratio of exemptions of drafted men for physical and mental disability will always appear much greater than the rejections made of recruits if based upon the number physically examined, but much less if made upon the number appearing before the board, or number constructively examined. The difference in the number actually reporting or constructively examined and the number physically examined is a material one. In all calculations upon the former, it is presumed that the disabled drafted man never fails to report for examination; and all others appearing before the board, furnishing substitutes, evidence of alienage, unsuitableness of age, incorrect enrolment, and other causes, are physically not disqualified for military service; and to base the comparative ratio of physical disqualification upon numbers not physically examined may erroneously show a much less degree of infirmity than really exists, while the latter always exhibits an excess of the correct number.

If the object is to obtain the ratio of disqualification in any given number of enrolled or drafted men, it then becomes necessary to embrace all disqualifying causes in the determination of that number.

In these reported rejections of recruits and substitutes there are included other causes than physical and mental—as want of stature, under age, over age, and bad character; all which are denominated legal and moral causes. Quite a large per cent. of rejected recruits and more than half of all the rejections of substitutes come under this head. Therefore, to place the several classes seemingly upon the same basis, a column of ratios rejected per 1,000 for physical and mental disability of all actually, as well as a column of all actually and constructively, examined is given. But the inequality is not removed, as a large per cent. of drafted men entering into reports as exempted, and consequently examined, include the “one-hundred-days men,” those paying commutation under draft prior to the act approved July 4, 1864, and drafted men released by voluntary enlistments, all of whom are examined constructively; and while they greatly diminish the ratio exempted for physical and mental causes by increasing the number examined, fail to add their just proportion of existing physical and mental disability. The number examined, including only recruits, substitutes, and drafted men, amounts to five thousand four hundred and eighty-four, (5,484.) Of this number, seven hundred and forty-three (743) were rejected and exempted for physical and mental disability; showing a ratio of disqualification of one hundred and thirty-five (135.4) per 1,000 examined. Separated into classes, the ratios rejected and exempted per 1,000 examined are as follows:

Recruits, ratio rejected for physical disability per 1,000 examined.....	128.8
Substitutes, ratio rejected for physical disability per 1,000 examined....	156.8
Drafted men, ratio rejected for physical disability per 1,000 examined..	135.1

This shows a less ratio rejected for physical and mental causes of drafted men than actually exists, and but for the reasons stated would appear greater than that of substitutes. (See table No. 1.)

The ratio of rejections of recruits and substitutes differ from that of drafted men under the several sections of the paragraph embracing the causes of exemption. The difference is explained by the voluntary and involuntary nature of

the presentations of the applicants, and by the ruling applied to the different classes. The decidedly feeble man, the confirmed consumptive, the paralytic, the deaf, and those having ulcers of long standing, seldom enlist ; while indifference and negligence on the part of this class to be relieved from enrolment places their names in the wheel, and many times their persons before the board of enrolment for examination as drafted men.

Under sections 8, 20, and 29, diseases of the skin, loss of teeth and hydrocele, the ratio rejected of recruits and substitutes is greater than for drafted men.

TABLE No. 1.—*Showing the number physically examined, the number appearing before the board, the number actually and constructively examined, the ratio rejected and exempted for all causes, and for physical disability, of each class, respectively.*

Twelfth district of Ohio.	Total number physically examined, 6,528.				Total number actually appearing before the board, 8,145.				Total number actually and constructively examined, 9,099.				
	Number physically examined.	Number rejected and exempted for all causes.	Ratio rejected and exempted per 1,000 examined.	Number rejected for physical disability.	Ratio rejected and exempted per 1,000 examined.	Number appearing before the board.	Number rejected and exempted for all causes.	Ratio rejected and exempted per 1,000 examined.	Number actually and construc- tively examined.	Number rejected and exempted for all causes.	Ratio rejected and exempted per 1,000 examined.	Number rejected and exempted for physical disability.	Ratio rejected and exempted per 1,000 examined.

THE 12TH DISTRICT OF OHIO.

The 12th district is composed of six counties; Pickaway, Ross, and Pike forming the western, and Fairfield, Hocking, and Perry the eastern portion of the district. The western counties embrace sixty miles in length of the Scioto valley, the corn-growing Eden of Ohio. The eastern counties are composed of elevated table-land and mountains; the former is well adapted to agriculture, and the latter abound in iron, coal, building-stone, oil, whortleberries, hoop-poles and shingles.

The district is divided into eighty-five (85) sub-districts, containing a total population in 1860 of one hundred and thirty-nine thousand four hundred and fifty-six (139,456.)

June, 1863, eighteen thousand three hundred and seventy-one (18,371) names of persons of twenty years of age, and under forty-five, were enrolled as liable to do military duty; one in seven and five-tenths ($7\frac{5}{10}$) of the total population.

The principal towns are the county seats, and contain a population as follows :

Circleville city.....	4, 500
Chillicothe.....	7, 600
Waverly.....	1, 000
Lancaster city.....	4, 300
Logan.....	1, 500
New Lexington.....	800
Total.....	19, 700

Total population of the county towns, nineteen thousand seven hundred ; a little more than one-seventh of the total population of the district.

Health.—The elevated and mountainous nature of the eastern counties renders this portion of the district remarkably exempt from endemic and epidemic forms of disease; while the valley, comprising the western counties, is equally noted for the prevalence of marsh miasmatic fever, and the hydra manifestations of this subtle poison. This inexplicable endemic constitution of locality, constantly emanating and administering a poison to the nervous centres and the secreting organs, causes a much larger per cent. of permanent walking invalids than is found in sections exempt from this influence. Typhoid fever, pneumonia, bronchitis, diphtheria, and intermitting fever, embrace the principal sporadic and endemic acute diseases incident to this locality. Since the prevalence of diphtheria in the autumn of 1860 no epidemic form of disease has been manifest.

Inhabitants.—Politically, a majority of the district is decidedly, and perhaps not honestly, adverse to the present administration. At one time, organizing and publicly drilling in several sections, they viciously contemplated resistance to law and the enforcement of the draft under the call of July 18, 1864; and looking upon every man in the service of the government as a public enemy, they made threats of great violence, and committed numerous private injuries. This continued until reasons, best known to the property-holders enlisted in the hazardous enterprise, induced a change in the conduct of this disaffected class, becoming in sentiment suddenly and greatly improved; and, under the stimulating influence of large local bounties and impending draft, many of the most infatuated entered the service by voluntary enlistments, and others relieved the district of their molestation and influence by making a change of residence unaccompanied by any change of enrolment.

Socially —With a fair system of public schools, four chartered institutions of learning, a State farm, and the ideopoietic power of the draft, there still exists a great deficiency of the rudiments of common information and morals.

Many of the elder portion of the present inhabitants are natives of other States—Pennsylvania, North Carolina, South Carolina, and a few of the first families of Virginia. These form the basis, and give caste and character to the society, institutions, modes of business, and manner of living.

The interests of the district are principally agricultural, and the inhabitants are industrious and economical; all can, and most do, obtain comfortable homesteads; and some have accumulated wealth, and live in the full consciousness of the superior advantages and influence of the American Union. Of the total number enrolled, thirteen thousand six hundred and twenty-eight (13,628) are farmers, and four thousand seven hundred and forty-three embracing all other occupations.

The aggregate amount of land under cultivation is about six hundred thousand (600,000) acres. Of this one hundred and fifty thousand (150,000) is devoted to wheat, and two hundred and sixty thousand (260,000) to Indian corn, and which yields annually over one and one-half million (1,500,000) bushels of wheat, and ten million (10,000,000) bushels of corn. Nearly two hundred thousand acres are seeded with other crops—rye, oats, barley, buckwheat, potatoes, and meadow.

Total yield annually, fourteen million (14,000,000) bushels of grain, and one hundred and twenty thousand (120,000) tons of hay—an income on these of more than ten and one-half million (10,500,000) dollars. In addition to the agricultural resources are the mining and manufacturing interests of no small importance. The former is yearly becoming of greater significance. Perry and Hocking counties, far inferior in agricultural products, are rich in undeveloped mineral resources, and are fast competing in wealth with other seemingly more favored portions of the district.

Excepting the manufacture of whiskey, flour, and leather, little else beyond local consumption is produced. The revenue paid on whiskey for the fiscal year ending June 30, 1864, (most of which was assessed at twenty cents per gallon,) amounted to five hundred and fifty-eight thousand one hundred and eighty three dollars and thirty-six cents, (\$558,183 36.)

Physical—The physical development of the inhabitants is commensurate with the demand for labor and the agricultural and mineral resources; and the soldier from this class of yeomanry should, from habits of life, be able to endure great fatigue; and the government may well accept with pride and satisfaction the men elected to fill the quotas of this district, as they have been furnished from the best physical development produced in this locality. (See Table No. 3.) Although the number examined shows nativities of thirty-nine States and countries, a great majority are natives of Ohio, and have enjoyed a country life, not of an easy, indolent, or luxurious character, but one subject to, and requiring great physical endurance; in the heat of summer and cold of winter they have been accustomed to active, laborious duties.

TABLE No. 4.—Showing measurements of chest, heights, and ages of recruits and substitutes physically examined from July 4, 1864, to April 30, 1865.

	Number.	Measurement of chest.						Height.			Age.					
		Average measurement at inspiration.	Inches.	Average measurement at expiration.	In.	(greatest measurement at inspiration.	In.	Least measurement at expiration.	In.	Average height of all examined. Of the total number, two thousand five hundred and sixty-eight (2,568) were farmers and farm laborers, and five hundred and seventy-two (572) including other occupations; two thousand two hundred and four (2,204) natives of Ohio and nine hundred and thirty-six (936) including the natives from all other States and countries.

The average physical development of the natives of Ohio is equal to that of all other States and countries, collectively, although many were youthful, reducing the average age of those accepted to twenty-three seven-tenths, (23.7,) or five years below the average of those from other States and countries; and the ratio rejected per 1,000 examined is considerably less than other nativities, collectively, (Table 4.)

Ratio rejected per 1,000 examined, recruits and substitutes, natives of Ohio	353.1
Ratio rejected per 1,000 examined, recruits and substitutes, other States and countries	480.9
Ratio rejected per 1,000 examined, recruits and substitutes, total number	391.4

The greatest number exempted for physical disability under any one section of paragraph 85, Revised Regulations, or for disability referred to therein, (Table No. 2.) has been for hernia; and, contrary to the commonly received opinion, more cases of right than left inguinal hernia are met with.

TABLE No. 5.—*Showing the number rejected and exempted for hernia, and physically examined, from May 10, 1864, to April 30, 1865, 6,528.*

	Hernia, right inguinal.	Hernia, left inguinal.	Hernia, right femoral.	Hernia, left femoral.	Hernia, ventral.	Hernia, umbilical.	Hernia, double inguinal.	Hernia, double femoral.	Hernia, phrenic.	Number physically examined.	Number exempted for hernia.	Ratio rejected and exempted per 1,000 physically examined.
Recruits and substitutes	38	19	1	5	5	2,457	68	27.6
Drafted men	28	20	1	1,396	49	35.1
Enrolled men	105	104	1	1	2	19	1	2,675	233	87.1
Total	171	143	1	3	7	25	6,528	350	53.6

Table No. 5 shows the number physically examined, and the relative frequency of the classification, as found in applicants for service, and as cause of exemption of enrolled and drafted men.

The influence of malaria, causing chronic change of function or structure of the internal organs, (sec. 5,) and the youthful exposure to accidents, dislocations, and fractures, (sec. 37,) in the rural districts, and which are frequently unattended by medical or surgical skill, leaving the sufferer with an unnecessary permanent deformity and disability, may, to some extent, account for the large ratios under these two sections.

For causes other than physical and mental disability, the rejections exhibit a still much greater proportion——. Seventy-seven (77) per 1,000 examined of recruits have been rejected for want of physical development, implying a deficiency of age. And the experience attained in this department tends to confirm that of others made in the field, that the minimum age is too low for re-

cruits, and the maximum at least five years too great for drafted men, to obtain efficient and enduring soldiers. Few boys of eighteen years of age are sufficiently matured to endure fatigue, exposure, and change of living consequent to the soldier; while the age of forty, with the laboring man in this climate, brings many ills unknown or uncared for below this period. The former is shown in the examinations of those under twenty years of age, and the latter is manifest in the exemptions of drafted men. In the examination of seven hundred and fifty-two (752) recruits and substitutes under twenty, and natives of Ohio, the ratio rejected per 1,000 examined amounts to three hundred and fifty-five; while nine hundred and eleven (911) examined of twenty, and not exceeding forty years of age, natives of the same State, shows a ratio rejected of only one hundred and eighty-three (183) per 1,000 examined. In the examination of thirteen hundred and ninety-six (1,396) drafted men, one hundred and thirty-eight (138) of the number were forty and under forty-five years of age. The ratio exempted per 1,000 physically examined of those under forty is two hundred and eighty-four (284;) and those forty, and under forty-five, amounts to three hundred and sixty-nine (369,) and the greater number of the accepted, or not exempt, bearing evidence of an inferior class. As an established consequence, the greater the ratio rejected of any class, comparatively, the more it increases the suspicions of the character and efficiency of those accepted.

TABLE No. 6.—*Showing the number of natives of Ohio of less than twenty years of age, and the number more than twenty years of age, of recruits and substitutes examined from July 4, 1864, to April 30, 1865; and the number of drafted men less than forty, and the number forty and less than forty-five years of age, physically examined, and the ratio rejected and exempted for each class.*

PARAGRAPH 85 OF THE REVISED REGULATIONS OF THE PROVOST MARSHAL GENERAL'S BUREAU.

§ 3. Of the numerous claims for exemption under section 3, paragraph 85, Revised Regulations, only two and three-tenths (2.3) per 1,000 of all examined have been exempted for epilepsy. "The statement of the drafted man being insufficient," the affidavit "of a physician in good standing, who has attended him in the disease within the six months immediately preceding his examination," can but seldom be procured. Epileptics do not usually employ a physician in the

disease; most certainly so in the country, among the poorer class, who soon become accustomed to know they will recover from the attack before medical aid could be obtained. And in many instances, no doubt, injustice is done parties afflicted with this unhappy malady. And I would suggest, as "fits," or epilepsy, could be determined as a matter of fact by duly attested affidavits of two or more respectable witnesses, requiring a description of manner, duration, and character of the same, leaving the medical inspector to determine the nature of the manifestations, might work greater justice towards this unfortunate class, without opening wider than now the door for fraudulent practices.

EXAMINATION—"MINUTE DETAIL."

The examination of men for the service is conducted in the following manner, and in the order herein stated:

A record is made with pencil in a small book, ($4\frac{1}{2} \times 7\frac{1}{2}$), writing day and date, name of the person to be examined in full; age, nativity, occupation, social relation, complexion, eyes and hair, where credited or where drafted, and if a substitute, the name of the person for whom he is a substitute, the sub-district where drafted or enrolled, with full descriptive list.

The following diagrams will more intelligibly explain the form and manner of making these most useful entries, (marked No. 2 and No. 2.)

Diagram No. 2.—*Before examination.*

27	CIRCLEVILLE, O., Monday, Feb. 13, 1865. Samuel McClellan, Va. Blue, light, fair. Married. If a recruit.—Credit for Springfield, T. P., Ross co. If drafted.—Drafted, Springfield, T. P., Ross co.	5	6
43	Farmer. Ohio. Gray, brown, dark. Married.		

Diagram No. 2.—*(Same.)—After examination.*

27	CIRCLEVILLE, O., Monday, Feb. 13, 1865. Samuel McClellan, Va. Blue, light, fair. Married. Credit for Springfield, T. P., Ross co. Veteran, 3 years. Anchor, flag, and safe on left arm; teeth, eyes, and ears good; heart's action and respiration normal; muscle and motion good; no evidence of herbia. Good. Lives at Wilkesville, Vinton co., O. Served 3 years and honorably discharged, 58 O. V. I. In good health; never sick. Accepted.	33	35
		5	9

Four books of this kind are kept in the examination room, marked upon the back of each the character of the entries, thus: "Recruits examined from February 16, 1865, to ———, 1865."

Books for substitutes, drafted and enrolled men, are, in like manner, also marked, and when filled with names, the month and day thereof is written, completing the indorsement upon the back, and showing the period of examinations contained in each.

One applicant only is recorded on a single page, and when a sufficient number of entries have been made spectators are required to leave the room; the doors are closed and locked, preventing all egress and ingress, and the men divest themselves of all clothing excepting pants and drawers. The first name recorded in any one of the books is called, and the man is placed with his back to a stationary measure, and the height taken in feet and inches, which is recorded at the right, filling the descriptive list; he is then measured by means of a graduated tape around the chest, at the lower border of the pectoralis major muscle, and the number of inches obtained at the termination of ordinary expiration; he is then requested to take a full, prolonged inspiration, and the measurement is again recorded. These measurements are always placed at the terminus of the name. Having measured, in like manner, all to be examined, the men divest themselves of the remaining clothing, and the surgeon proceeds in the same order of names, by a rehearsal of questions, eliciting answers to the statements contained in the record, with such other interrogatories as may tend to establish a correct opinion of the age, nativity, alienage, intelligence, health, and liability to periodical diseases; and qualifications, legal, mental, and physical, required of recruits, substitutes, and drafted men.

Any marks, scars, or change of conformation, is next observed and noted. This being satisfactory, the head, eyes, ears, nose, teeth, and throat are inspected. The cranium is examined by tact; the eyes, eyelids, ears, nose, teeth, palate, and fauces, by ocular inspection. The sight is tested by reading, or small objects at proper distances, with the right and then the left eye.

The hearing is tested by conversation; if a recruit or substitute, in a low tone of voice; if a drafted man claiming deafness, in a loud tone, coming down the scale rapidly, at the same time interesting him with answers relating to himself, and which will most always detect attempted imposition.

Any disease or peculiarity of the head, eyes, ears, teeth, or palate, is now noted in the book, immediately under the description of the applicant or previous remarks.

The chest and organs contained are next in order of examination. The symmetry, development, and subclavian regions are carefully inspected; the frequency of respiration and the heart's action are observed, and any deviation from a normal standard is noted. The man is now required to walk briskly several times around the room, throwing the heels against the gluteal muscles each step, then to cross the room, first on one foot and then upon the other; to throw the arms erect over the head, and to place the back of the hands together in this position; to flex and extend the forearms, hands, thumbs, and fingers; to pronate and supinate the hands, and to extend and flex the toes. He is now again examined with reference to the organs of the chest, and any material change in respiration and circulation from this exercise is noted, also all other causes tending to disability observed.

The abdomen is next in order. The gastric and hypochondriac regions are examined by tact; the finger is introduced into the inguinal space, and the party required to pass the arms over the head, to cough, and stooping, lift at dead weight, &c. Where hernia is claimed but not apparent, or where the state of the abdominal rings creates the least suspicion of this disability, if a recruit or substitute, he is required to lean forward upon his hands, placing his feet widely apart, that hemorrhoids, fissures or fistula may, if in existence, be dis-

covered. The drafted man can tell his own ills. The result of this is now recorded.

The spine and extremities are examined, and any deformity, scar or mark is noted; and any disability found, minutely described. After this, any remark calculated to identify the party by association is in order. The result of the examination is determined at any stage when a disqualifying cause is found to exist, by writing after a description of disability the words "rejected" if a recruit or substitute, and "exempt" if a drafted or enrolled man, completing the examination as represented in diagram No. 2.

The certificate of examination on triplicate enlistment papers of the recruits accepted is now signed by the surgeon, and the enlistment papers of those not accepted are marked upon the face "rejected."

The records of examination are passed to the clerk of the examination room, who prepares *two lists* of those accepted or not exempt, giving the sub-district where credited and regiment for muster, if a recruit; if a substitute, the name, and also that of the party for whom he is a substitute, and where enrolled or drafted; and if a drafted man, when and where drafted. (See lists No. 1 and No. 2.)

List No. 1 is given as a certified requisition for muster to the provost marshal, who proceeds to muster the recruits and enlist the substitutes upon this evidence of physical fitness.

The drafted men not exempt sign duplicate clothing receipts and separate receipts for the spoon, knife, fork and plate, and which is required to be witnessed by the surgeon.

The drafted men exempted are furnished with a certificate of exemption, (Form 31 or 32,) signed by the members of the board of enrolment; the substitutes accepted sign their enlistment papers (Form 39) and their clothing receipt.

The names upon the lists are now called, and the men answering stand in file in the order in which the names occur, and those rejected and exempted are discharged from the room. The mustering officer now musters the recruits and enlists the substitutes.

LIST No. 1.

CIRCLEVILLE, OHIO, February 13, 1865.

For muster, enlistment, and service.

No.	Name.	Where credited.	Remarks.
1	Thomas Bowers	Springfield township and Ross	184th regiment O. V. L
2	James Williamson ...	Perry township and Hocking	179th do. do.
3	Joshua F. Whip	Jackson township and Pickaway ...	Substitute for John Hammel, enrolled.
4	William Sheran	Wayne township and Pickaway	Substitute for Thomas Foster, drafted.
5	Daniel D. Hayley	Huntington township and Ross	Drafted December 21, 1864.
6	James R. Brown	Benton township and Pike	Drafted November 19, 1864.

LIST No. 2.

CIRCLEVILLE, OHIO, February 18, 1865.

John R. Botkin, accept, subsist, and lodge the following named men :

Recruit.....	1	Thomas Bowers	Springfield, Ross, 184th regiment.
Do	2	James Williamson	Perry, Hocking, 179th regiment.
Substitute	3	Joshua F. Whip	Jackson, Pickaway, for John Hammel.
Do	4	William Sheran	Wayne, Pickaway, for Thomas Foster.
Drafted	5	Daniel D. Hayley	Huntington, Ross, December 21, 1864.
Do	6	James R. Brown	Benton, Pike, November 19, 1864.

By order:

GEORGE W. ROBY,
Captain and Provost Marshal 12th District, Ohio.

The recruits mustered sign duplicate clothing receipts, which are witnessed in due form; after which the names are again called, and the men, placed two and two, are marched to the clothing room to obtain their new purchase, and from thence to the barracks, where they are by the orderly turned over, with list No. 2, to the person in charge of the premises.

All this portion of the service is necessarily transacted in the examination room, and constitutes a part of the details of the examination. Much time and great care is required to make those primary steps in the records and lists correctly, as they are to be used in making the muster and descriptive rolls, and constitute the basis of the records of the office.

Number examined.—With the limited facilities afforded the surgeon for making those examinations, fifty men is the average number that can be physically examined per day with accuracy; with three rooms instead of one, one hundred and twenty could be examined in ten hours, if all were present at the proper time.

More time is consumed in the examination of drafted men than either recruits or substitutes; it is so necessarily. To treat them kindly, the surgeon must show every attention, hearing every manner of claim; must look at affidavits and medical certificates, and hear parole testimony, &c., &c., although he remains, if possible, more the same opinion still. The recruit or substitute may be rejected upon hearing an answer to a single question, while a drafted man in justice can make no statement nor answer to any question having the least weight or influence in his case.

FORM A.

Applicants for service.

12th District, Ohio.			Circleville, December, 1864.																		
Number.	Month.	Day.	Name.	Occupation.	State nativity.	Eyes.	Hair.	Complexion.	Recruit.	Substitute.	Drafted.	Accepted.	Rejected.	Age.	Height.	Expiration.	Inspiration.	Social relation.	Color.	Time.	Remarks.
1868	Dec.	9	Cornelius Casper	Farmer	Ohio	Gray	Light	Fair	1			1		37	5.6	36	37	M.	W.	1	
1869	Dec.	9	Adam Schneider	Tanner	Prussia	Gray	Gray	Dark		1			1	45	5.8	34	35	S.	W.	0	Over age.
1870	Dec.	9	John Brown	Laborer	Germany	Blue	Brown	Fair			1		1	35	5.7	33	34	M.	W.	1	Hernia, right inguinal.

At the end of each day the entries made in the memorandum books of recruits, substitutes and drafted men are transcribed into a book ruled for the purpose in the manner designated by Form A. From this book or blotter the monthly reports are made and forwarded. The contents are also transcribed into the Medical Record in full. The drafted men are again transcribed into the medical record for drafted men. The names of enrolled men examined are passed through a separate set of books in like manner, and are transcribed into the Medical Record for Enrolled Men. The footings for each day of each class, in the Medical Record for Recruits, Substitutes and Drafted Men, is made in red ink below the terminus of the last name for that day in the space "remarks," and footings of each page in like manner is made at the margin, the one acting as a check upon the other; and at the end of each month the sum of the two footings are arranged in separate tables, and, if free from error, will show like results. These tables are recorded at the page ending the month for the purpose of aiding in obtaining information in future reference.

It being practically inconvenient to keep a medical record book for recruits and substitutes and one separately for drafted men, I have carried forward in separate columns recruits, substitutes and drafted men, showing a complete record in one place the business of each day.

§ As enrolled men are not examined during recruiting and drafting, they appear upon books for that purpose only.

The measurement of the chest will differ materially if made at different points, and in the absence of any positively established rule, the measurements have been made around, at or immediately above the origin of the pectoralis major muscle. Expiration at ordinary and not forced contraction of the chest and inspiration at full inflation. Many subjects with good lungs will not make that free inspiration their ability would permit, and are indifferent to the request; while boys of eighteen and too youthful to be accepted, having imagined or been informed that success depended upon the size of the chest, will inflate themselves with an elasticity almost equal to *Æsop's* toad.

If the forced voluntary expulsion of air from the lungs and the free and forced inspiration could be obtained, these measurements would show much nearer than now the true mobility of the chest. But it is not possible in the despatch of business to obtain full consent by making the subject understand the object, it being to them a species of novelty. Therefore forcible expiration has not been insisted upon, and the inspirations have not in all cases been satisfactorily forced.

FRAUDS:

The frauds most to be guarded against as practiced by enrolled and drafted men, to escape service, are those sustaining claims of insanity, imbecility, general physical disability and deafness.

These are generally subjects of contract, secured by some enterprising firm engaged in the business, and which usually is composed of an active, venerable and experienced attorney-at-law and an elastic country doctor. With these legal qualifications as a firm, the claim of the drafted man is presented with an overwhelming array of affidavits, and which always renders the statements more or less suspicious; and if by counter-testimony the claim is decided untrue as to degree or nature of the disability, it is frequently pressed at general rendezvous to a successful termination, greatly to the detriment and influence of the district board. Experience has determined that affidavits procured for drafted men by this class of "friends of the government" are generally unreliable, and should be accepted with great caution and due allowance.

The medical partner of one of these firms presented a drafted man with the oral statement that the party was an "idiot," and had been one for a number of years. He was armed with a bundle of affidavits, his own among the num-

ber, fully establishing insanity, with liability to a recurrence. Upon investigation of the case the whole sworn insanity or "idiocy" was founded upon an attack of mania a potu a number of years since. While in this state of phrensy he made an attempt to kill his wife, the after reflection of which reformed him of the habit of intemperance, but could not release him from the draft. Many varieties of analogous illustrations might be given, showing the character of the great mass of evidence in those contract claims of premeditated fraud by parties who no doubt labor for a stipulated compensation.

Some of these claims are so strongly fortified and ingeniously managed by counsel, that in the absence of other and more reliable testimony they would be accepted as any other established matter of fact. For this reason, it would be much better not to hear those claims at general rendezvous than to decide them merely upon the testimony presented by persons having a pecuniary interest in the success of the same.

By section twenty-one amended act, approved March 24, 1864, these attempts are made a penal offence, knowing the claims to be false; yet many experts are willing to engage in a business, for a liberal compensation, directly opposed to the spirit of the act.

It would relieve the surgeon (as well as the board of enrolment) of this special annoyance, if every man presenting the claim of a drafted person, and those writing or obtaining affidavits, or in any other way assisting in the procurement of the release of the drafted person, were required to file, in every instance, their affidavits, that they have not and never expect to receive, and never will receive, directly or indirectly, any compensation for the act or services rendered in the case. And the drafted man should also be required to file a similar affirmation, that he has not paid, directly or indirectly, any person or persons money or other valuable consideration; that he has not made any gift or present to any person in consideration of services rendered, or that may be rendered, in his behalf as a drafted man, and that he never will, upon any contingency, or otherwise, so pay, donate, or give anything in consideration thereof.

It is not easy to prove an attorney knows a claim to be false, while perjury might readily be established in the continuation of these fraudulent practices.

The frauds most to be guarded against in recruits and substitutes are of a legal character, as age, alienage, &c. Substitutes, to relieve persons furnishing them for a definite period of time, must be procured from that class of persons not liable to enrolment and draft. And to admit alienage of parties upon their own affirmation, or the same supported by substitute brokers, or others pecuniarily interested, "to the best of their knowledge and belief," has not been satisfactory, and the board has required official certificates, if recently from another government, and if residents of the United States, the additional affidavits of two or more freeholders of respectability, embracing the following points: length of time known the party; his residence and occupation; that he never at any time assumed the rights of a citizen, by voting or other act, and this to be certified by the clerk of the court of the county claiming residence in. This most effectually prevented bounty-jumping, by deterring agents engaged in the business from presenting for examination those unable to sustain a satisfactory record.

Minors are of two classes—those eighteen years of age, who appear sufficiently developed for twenty-one, and those eighteen who are young enough to be classed at fifteen. The former are mostly applicants as substitutes for two years; and many times, to their great surprise, when residents of the district, find their names upon the enrolment lists in time to prevent the crime of perjury.

PHYSICAL APTITUDE.

Physical aptitude for military service must be derived from actual observation. And the information contained in this brief space is in some particulars

at variance with the statements of Professor Robert Barthelow, who claims a decided preference for the white, and prefers the pure negro to any admixture, and offers the reason, that "in the United States the pure African is rarely found," and "few negroes having admixture with white blood are free from scrofula, independently of locality." This statement is not sustained by the examinations made at this office of two hundred and ninety-six (296) colored men of all shades, from the black wool to the blue eyes, fair skin, and light hair, embracing natives of twelve States, and Canada.

Not more than two of this number were rejected for causes involving a reasonable supposition of a scrofulous diathesis.

Physical examinations also demonstrate the admixture with the white, "while it elevates his intellectual powers, and gives symmetry to his form," does not lower his health and efficiency.

Table No. 7, which has been carefully and accurately prepared, shows the causes of rejection, and the ratio rejected per 1,000, of all colored recruits and substitutes physically examined, from July 4, 1864, to April 30, 1865; and which shows the ratio rejected of colored recruits to be a small fraction more than half as great as that of the same class of examinations of white applicants; and while the rejections have been much less, the physical development of those accepted is equal to the white of this nation, and better than that of all other nations collectively.

Colored men are well muscled, have good eyes, good teeth, good lungs, and a digestion seldom a source of torment from coarse food. They are active, are inured to hardships, are not liable to experience ill effects from malaria and the heat of summer sun; they sustain well and recover readily from injury or disease, and will not "freeze," or lose the powers of "reproduction," nor "become extinct" much sooner than the white man. (See table 8.)

TABLE No. 7.—Showing the number and the ratio per 1,000 of colored men rejected.

TWELFTH DISTRICT OF OHIO

Colored men examined from July 4, 1864, to April 30, 1865.	Number of recruits examined, 207.		Number of substitutes examined, 89.		Total number examined, 296.	
	Recruits rejected.	Ratio rejected per 1,000 physically examined.	Substitutes rejected.	Ratio rejected per 1,000 physically examined.	Ratio rejected per 1,000 examined for physical disability, colored recruits and substitutes.	Ratio rejected for all causes per 1,000 physically examined, colored recruits and substitutes.

The muscular development of the limbs of those examined has been good. If there is a deficiency of the gastrocnemius peculiar to this race, those having this distinctive mark have failed to appear before the board.

Their feet are flat, but not of a nature to disqualify them from performing well active infantry service.

This experience touching their physical qualifications, and the comparisons that may justly be drawn, would tend to establish the conclusion, that they present a greater physical aptitude for military service than any other nation, and even greater than the white population of the same nation.

ENROLMENT LAW.

Several sections of the present enrolment act as amended might be subject to some improvement in their working operation; and no one stands more at fault, perhaps, than section 21, amended act, February 24, 1864.

This section is intended to prevent or punish the fraud before the board of enrolment; and nineteen-twentieths of all violations come under the observation of the surgeon, and who must become informer or chief witness; and a few cases and the attendance upon subpoenas at long distances will satisfy any reasonable person, or any other man that few prosecutions or convictions, however prevalent this evil may exist, as it has existed before every board of enrolment in this country, will ever be made.

The experience obtained in prosecutions under this section has been satisfactory upon one point at least: that there should be a provision fully compensating witnesses for the time and expense necessarily incurred in the attendance upon the requisite legal proceedings in these cases.

I am, general, very respectfully, your obedient servant,

N. E. JONES,
Surgeon Board of Enrolment, 12th District, Ohio.

REPORT
OF THE
MEDICAL BRANCH
OF THE
PROVOST MARSHAL GENERAL'S BUREAU
BY

J. H. Baxter,

Surgeon and Brevet Colonel, U.S.V.,
Chief Medical Officer

REPORT OF MEDICAL BRANCH. .

WAR DEPARTMENT, PROVOST MARSHAL GENERAL'S BUREAU,
Washington, D. C., March 17, 1866.

GENERAL: In compliance with your order dated September 2, 1865, I have the honor to submit for your information the following historical report of the operations of the medical branch of your bureau, from its organization to the present date, and a *preliminary* report of the medical statistics on file therein.

I have the honor to be, General, very respectfully, your obedient servant,

J. H. BAXTER,

Surgeon and Brevet Colonel, U. S. V.,

Chief Medical Officer, Provost Marshal General's Bureau.

Brevet Major General JAMES B. FRY,

Provost Marshal General.

HISTORICAL REPORT OF THE MEDICAL BRANCH PROVOST MARSHAL GENERAL'S BUREAU.

Section 6 of the act approved March 3, 1863, for enrolling and calling out the national forces, and for other purposes, made it the duty of the Provost Marshal General, with the approval of the Secretary of War, to institute rules and regulations for the government of his subordinates, and to require stated reports of all proceedings on their part. In pursuance of the above, surgeons of boards of enrolment were called upon to furnish reports of the results of their examinations of men for the army, and in order to establish uniformity among them, it was deemed necessary that a commissioned medical officer should be detailed for service under the Provost Marshal General, whose duty it should be to advise and direct surgeons of boards of enrolment in the performance of their duties, and who should have the custody of all reports and returns from them, for the purpose of their proper preservation and discussion.

The organization of a medical branch of your bureau had not been completed prior to the date of your order assigning me to duty as chief medical officer, a copy of which is as follows, viz :

WAR DEPARTMENT, PROVOST MARSHAL GENERAL'S BUREAU,

Washington, D. C., January 11, 1864.

Surgeon J. H. Baxter, United States volunteers, having reported for duty in accordance with Special Order No. 5, Adjutant General's office, War Department, 1864, is hereby assigned to duty as chief medical officer.

JAMES B. FRY,
Provost Marshal General.

Upon the receipt of the above order, which created the medical branch of this bureau, I immediately opened an office in quarters assigned for that purpose.

Under the previous able administration of Lieutenant Colonel R. H. Coolidge, medical inspector United States army, all medical matters pertaining to your bureau had been conducted with rare skill and executive ability.

A list of diseases and disabilities, for the government of surgeons of boards of enrolment, had been prepared by a medical board, of which Medical Inspector Coolidge was president, and medical questions in regard to the formation of the invalid corps had received his assiduous care and attention. I take this occasion to express my personal and official obligations to this experienced and patriotic officer, (whose recent death has deprived the medical corps of one of its most zealous and accomplished members,) for his valuable counsel so freely tendered me in the establishment of this branch of your bureau.

By personal inspection of many boards of enrolment, and by correspondence, I acquainted myself with the difficulties under which surgeons of boards labored, and by circular letters and forms for medical record books and reports issued from this branch, a uniformity of action was established, which resulted not only to the good of the bureau, but rendered less onerous and more correct the performance of the duties devolving upon the surgeons of boards of enrolment.

The record books are similar to those prescribed in the pamphlet issued by the Adjutant General entitled, "Instructions for Officers of the Adjutant General's department, and others of kindred duties," *i. e.*, "Letters Received," "Letters Sent," and "Endorsement and Memoranda;" and the method adopted in keeping said books has not differed in any material point from that laid down in the work referred to, which is so universally followed that I do not deem it necessary to detail it in this report. The medical reports accumulated so rapidly, and were of such size, that it was thought necessary to open a separate book in which to record their receipt. This book is entitled, "Record of Medical Reports Received."

Immediately upon the receipt of the mail from the office of "general and miscellaneous business," it was opened and examined by the chief clerk of this branch, and all letters pertaining to this office, or involving medical questions, with the exception of letters of transmittal of the regular "medical reports," properly endorsed and entered in the book of "Letters Received;" after which, those letters requiring the attention and action of the chief medical officer were submitted to him, and disposed of according to his direction.

The "medical reports" were first entered in the "record of medical reports received," submitted to the chief medical officer, or to one of the medical officers on duty in the branch, by whom they were examined as to the medical points involved, after which they were sent to the "examining room," where they passed through a thorough examination by a corps of competent clerks, and if no errors were detected after this second examination, they were placed in wrappers and filed by States and districts to be tabulated in future.

If, however, the surgeon making the report had not complied strictly with instructions previously issued, the report was returned to him through the acting assistant provost marshal general of his State, with endorsement enumerating the errors, and with directions to either forward a new report, or the original carefully revised and corrected.

The stated medical reports are of two kinds, viz: "monthly medical reports," and "reports of the medical statistics of drafts," (Form 58;) the former received monthly, and the latter at the close of each draft from each congressional district.

The "monthly medical reports" were made by the surgeons of boards of enrolment upon blanks furnished from this office, being copied from the "medical record books" kept by the surgeons. These reports contained a complete and minute record of the physical examination of all recruits, substitutes, drafted, and enrolled men, during each month. The following data given in the case of each man examined, will show more clearly the value of these reports, viz:

Date of examination; number ditto; name; age; height; complexion; color of eyes and hair; nativity; residence; occupation; measurements of chest; white or colored; married or single; physique; and result of examination; stating also the disease or disability for which the man was rejected or exempted.

"Reports of medical statistics of drafts" were rendered at the close of each draft, and were also made upon blanks furnished from this office, (Form 58.) Each of these reports comprised a series of four tables.

The first table exhibited the number of drafted men of each occupation physically examined; the number exempted for each distinct disease or disability, alphabetically arranged; the number appearing before the board; also the number of each occupation exempted under each section of paragraph 85 Revised Regulations Provost Marshal General's Bureau.

The second table exhibited the total number of drafted men exempted under each section of the above-mentioned paragraph, and the ratio exempted under each section per 1,000 examined.

The third table, by nativities, embraced the vital statistics of all men examined under the draft for which the report was rendered; and the fourth table being a consolidation of the third.

The whole number of clerks employed or detailed for duty in this branch, from its organization to the present date, is forty-two; greatest number employed at any one time, seventeen; average number employed per month, eight.

A large proportion of the clerical force of this branch have been soldiers detailed from the Veteran Reserve Corps. A large majority of the citizen clerks had served in the Union army or navy previous to their appointment. Out of sixteen clerks on duty in this branch at present date, twelve have served in the army or navy, and have rendered a total of forty-two years and seven months' service, making an average of three years and six months, or an average of two years and eight months for the whole force.

By a reference to schedule A, a list of all commissioned medical officers who have been on duty in this branch since its organization may be found; dates when each officer was detailed and relieved, to what duty assigned, &c.

VIEWS IN REFERENCE TO THE LIST OF DISEASES AND INFIRMITIES FOR THE EXEMPTION OF DRAFTED MEN, AND CHANGES RECOMMENDED.

The several sections of paragraph 85, in which are enumerated the diseases and disabilities for which drafted men should be exempted, have proved, as a general rule, acceptable, and but few cases have presented themselves deserving exemption which could not be classified under its requirements.

Of course, no precise enumeration of all the particular diseases or disabilities which could disqualify drafted men for military service was possible, but paragraph 85 was given as a general guide, yet directing, as far as practicable, the judgment of examining surgeons. By rendering as definite as possible the list of disqualifying mental and physical disabilities, much trouble and annoyance were saved to surgeons of boards, and promptness of decision facilitated. Moreover, the drafted man seemed better satisfied if it was possible to

point out to him that the surgeon, in his decision not to exempt him from service, simply obeyed the instructions received from higher sources.

Experience has proved some few alterations necessary, and I respectfully submit the following changes, which present themselves to my mind as desirable and worthy your consideration. For the purpose of making these changes the more readily comprehended, I write out in full the section as, in my opinion, it should read after all amendments:

Paragraph 85.

SECTION 1. No change.

SEC. 2. No change.

SEC. 3. Epilepsy. For this disability *the statement of the drafted man is insufficient*, and the fact *must* be established by the duly attested affidavit of a physician in good standing, who has attended him *in* the disease within six months immediately preceding his examination by the board, or in default of such evidence, the affidavits of at least three respectable citizens who have seen him in a convulsion within six months, and have personal knowledge of his being subject to repeated attacks.

SEC. 4. Paralysis, general or of one limb or chorea; their existence to be adequately determined. Decided atrophy or hypertrophy of a limb.

SEC. 5. No change.

SEC. 6. No change.

SEC. 7. No change.

SEC. 8. No change.

SEC. 9. No change.

SEC. 10. No change.

SEC. 11. Chronic rheumatism, involving change of structure or distortion.

SEC. 12. Total loss of sight of either eye; cataract of either eye; loss of crystalline lens of either eye.

SEC. 13. Partial loss of sight of both eyes, vision being so greatly impaired as to leave no doubt of the man's inability to perform military duty. Serious permanent diseases of the eye or eyelids, so manifestly affecting the use of the eyes as to leave no doubt of the man's incapacity for military service. Near-sightedness does not exempt, unless excessive and confirmed.

SEC. 14. Loss of nose; deformity of nose so great as seriously to impede respiration; ozaena with caries.

SEC. 15. Decided deafness, dependent on organic change, or proved by other satisfactory evidence, so decided as to leave no doubt of the man's unfitness for military service. Chronic purulent otorrhœa.

SEC. 16. Incurable diseases or deformities of either jaw, which greatly impede mastication or speech—ankylosis of jaw; caries of the bones of the face, if in progress; cleft palate, (bony;) extensive loss of substance of the cheeks, or salivary fistula.

SEC. 17. No change.

SEC. 18. Loss of tongue, or diseases thereof sufficient to interfere seriously with the use of that organ.

SEC. 19. No change.

SEC. 20. Loss of a sufficient number of teeth to interfere seriously with mastication.

SEC. 21. Tumors or wounds of the neck, impeding respiration or deglutition. Torticollis, if of long standing and well marked.

SEC. 22. Deformity of the chest, curvature of the spine, or caries of the spine, ribs, or sternum, sufficient to prevent the carrying of arms or military equipments.

SEC. 23. Hernia, except small umbilical.

SEC. 24. Artificial anus, stricture of the rectum, prolapsus ani, fistula in ano. if extensive or complicated.

SEC. 25. Old and ulcerated internal or external hemorrhoids, if in degree sufficient to leave no doubt of the man's unfitness for military service.

SEC. 26. Loss of penis; epispadias or hypospadias.

SEC. 27. Chronic organic stricture of the urethra, which seriously impedes the passage of urine, or which is complicated with disease of the bladder. urinary fistula. Recent or spasmodic stricture of the urethra does not exempt.

SEC. 28. Incontinence of urine, stone in the bladder, or gravel, ascertained beyond doubt, absolutely disqualifies.

SEC. 29. Confirmed or malignant sarcocele; hydrocele, if complicated with organic disease of testicle. Varicocele is not disqualifying, unless excessive and severe.

SEC. 30. No change.

SEC. 31. No change.

SEC. 32. No change.

SEC. 33. Loss of right thumb. Loss of third phalanx of all the fingers of either hand. Loss of index and middle finger of same hand. Permanent extension or contraction of two fingers of either hand. All the fingers adherent.

SEC. 34. Permanent defects or deformities of the feet, such as will necessarily prevent marching.

SEC. 35. No change.

SEC. 36. No change.

I respectfully recommend that paragraph 57 should be amended to read as follows:

The surgeon of the board of enrolment will keep three medical record books, in which he will record the following results of his examinations of all men he may inspect—

1st. Of drafted men.—Date of examination, number, name, where drafted, (town or county,) age, nativity, occupation, height, weight, color of eyes, hair, and complexion, chest measurements at inspiration and expiration, married or single, white or colored, and result of examination. He will also record under head of remarks, if exempted, the disease or disability for which exemption was granted; if not exempted, the disease or disability for which exemption was claimed.

2d. Of enrolled men the same, except "where enrolled" (town and county,) in place of "where drafted." If stricken from the enrolment lists, state under head of remarks the particular disease or disability for which the enrolled man was found unfit. If not stricken therefrom, the disease or disability for which he claimed unfitness.

3d. Of recruits and substitutes.—Date of examination, number, name, age, nativity, occupation, height, weight, color of eyes, hair, and complexion, chest, measurements at inspiration and expiration, married or single, white or colored, recruit or substitute, and result of examination. Under remarks, if rejected, state the reason why; if accepted, record some mark or scar which may be on his person by which he may hereafter be identified.

The surgeon of the board of enrolment will also forward a monthly medical report of the drafted and enrolled men and recruits and substitutes he has examined. This report will be a copy of the medical record books above enumerated, and will be forwarded in duplicate the first day of each month; one copy direct, and one copy through the acting assistant provost marshal general.

Immediately on the completion of a draft in any district, the surgeon of the board of enrolment will compile and forward to this office the statistics of the causes of exemption on account of physical or mental disability from such draft in his district, (Form 58.) This report will be accompanied by a detailed state-

ment of such other facts as may be of scientific importance to the medical profession. This report will also be forwarded in duplicate, one copy direct, and one copy through the acting assistant provost marshal general. In the keeping of his records and preparation of reports, the surgeon of the board will be entitled to a clerk, whenever the services of one may be necessary.

MEDICAL EXAMINATION OF MEN FOR MILITARY SERVICE AND FRAUDS TO BE GUARDED AGAINST.

The medical examinations of men for the military service were made in a large, well-lighted room, where they could be exercised briskly, and with the windows so arranged that the light fell equally upon every portion of it.

Upon entering the room the recruit, substitute, or drafted man was directed to divest himself of all his clothing. This was usually done in the presence of the surgeon, for this reason: that he was not then expecting to be noticed, and should he feel disposed to conceal any existing defects, as stiff joints, &c., he would in this way be thrown off his guard, and the attempted fraud at once detected without further examination.

He was first questioned in regard to his name, age, nativity, occupation, his general health and that of his family, whether any hereditary taints existed, and if he had ever suffered from any disease or accident, and if so, what; thus endeavoring to obtain all the information possible concerning him, and at the same time enable the surgeon to judge of his mental as well as his physical qualifications.

He was then placed under a stationary measuring rod, directed to stand erect, while his height was accurately noted, and a graduated tape was passed around the chest over the inferior angles of the scapula, and directly over the nipple, and the measurement taken both at inspiration and expiration. After this the color of the eyes, hair, and the complexion were noted, and a general inspection of the whole body was now made, noticing the muscular development and general appearance, at the same time looking carefully for any tumors, ulcers, varicose veins or chronic swellings of the extremities, or any defect that could disqualify him for the service.

The head was then examined for any depressions or irregularities that might exist; the eyes, eyelids, ears, nose, teeth, palate, and fauces, carefully noticed.

The chest was then inspected, respiration and the action of the heart observed, and anything that could be discovered by inspection, auscultation or percussion, noted.

He was next directed to stand erect, place his heels together, and raise his hands vertically above his head, the backs together, and was told to cough and make other expulsive movements, while the abdomen, inguinal rings, and scrotum, were examined for hernia; the penis was then examined for epispadias, hypospadias, and venereal disease; the groin for glandular enlargements, and the testicles for atrophy, induration, or other diseases.

He was then directed to bend over, the fingers touching the floor, the legs straight and widely distended, and separating the nates, the fissure, for hemorrhoids, fistula, prolapsus, or any disease of the anus, was carefully inspected; and while in this position, firm pressure was made on different portions of the spine to discover any disease or tenderness, if such existed.

Next he was directed to extend his arms straight from the body, and then bring them together on the same level, behind and in front, pronate and supinate them rapidly, strike-out from the shoulder, flex the arm upon the shoulder, and the forearm upon the arm, and open and close the fingers rapidly. In this way almost any defect of the upper extremities were discovered.

He was then told to walk rapidly, and then to run around the room several times, hop first on one foot and then on the other, with his heels together to

raise himself upon his toes, then flex and extend the thigh, leg, and ankle, kick first with one foot and then the other, and make several leaps in the air. While thus excited, he was again examined for chest diseases and also for hernia.

The eyesight was next tested by placing him at one end of the room, while the surgeon stood at the other, and asking him the number or color of objects displayed to each eye separately. The hearing was also tested at the same time by modulating the tones of the voice while conversing with him, and covering one ear while endeavoring to discover any defects that might exist in the other.

The remaining portion of the record was then made out, result of examination recorded, and, in case of rejection, the disease or infirmity for which he was found unfit for military service written out in full.

In case of recruits and substitutes, when accepted, some mark or scar which was on their body was recorded for the purpose of future identification.

The number of men that can be examined per day with accuracy depends not only upon the character of the men examined, but whether or not they are drafted men, as much more time must be devoted to them in answering all their questions and listening to and deciding upon their claims for exemption than in the examination of recruits or substitutes. Forty, however, is a fair average, of all classes, of the number of men that can be examined per day with accuracy.

Various modes were adopted for the detection of frauds practiced by recruits and substitutes to enter, and by drafted and enrolled men to escape, the service.

The volunteer and the drafted man are governed by very different motives in presenting themselves for examination; for, while the former tries to conceal every physical defect, the latter is equally anxious to magnify every slight ailment. If the volunteer resorts to false teeth, hair-dye, and falsehoods to conceal his age, bandages for varicose veins, and the application of ice for hernia, the drafted man also feigns deafness, blindness, liver and kidney complaints, or any other disease that will avail him in his extremity.

When deafness is feigned, the following method was found useful for detecting it: the man was seated directly in front of the surgeon and close to him; a watch was then placed against one of his ears, and he was asked, in a loud tone, "if he could hear it;" to which he usually answered in the affirmative. The watch was then withdrawn a few inches, and the question repeated in a low tone several times, gradually withdrawing the watch and sinking the voice until it was scarcely more than a whisper; while his attention was fixed upon the watch he did not notice how far the surgeon had moved from him, or in what tone he was speaking.

The would-be-blind man was detected by telling him that he must accompany the surgeon to a place prepared to test the eyesight; and, taking him up and down stairs, over logs, boxes, and impediments of all kinds, and if he avoided all these his blindness was not considered sufficient to unfit him for the military service.

Cardiac disease is often feigned, and men frequently present themselves for examination after having undergone violent physical exercise; in such cases they should be allowed to wait and sit quietly for at least half an hour, and then, by careful examination, the attempted fraud can usually be detected at once.

The frauds against which the examining surgeon has to guard, it will be seen, are as various as the characters of the men examined, and no rules can be given to govern in such cases: but, to guard successfully against these frauds, aside from professional skill, he should be conversant with the frailties and idiosyncracies of human nature, and be able to turn his knowledge to account, for he must rely, to a great extent, upon his own judgment.

SURGEONS OF BOARDS OF ENROLMENT, WITH RECOMMENDATIONS AS TO THEIR FUTURE APPOINTMENT AND STATUS.

Medical, like all other talent, should not be expected without proper compensation; and, although this bureau obtained it, it is nevertheless true that the great majority of the late surgeons of boards continued in the position from a patriotic desire to serve their country, or a personal feeling of pride, (that, having commenced, they would continue to end,) fearing, perhaps, that in the case of resignation their enemies would ascribe it to the fact that they were obliged to do so for faults committed in the performance of their duties.

Many surgeons of boards received the appointment unsought, having been recommended by their respective members of Congress on account of their high standing in community. They were men of ability and honesty, and, indeed, in their recommendations of physicians for the position of surgeons of boards of enrolment, members of Congress seem to have selected, as a rule, only those who, on account of attainments, experience, and honesty, they considered best fitted for the position.

The position of the surgeon on boards of enrolment has been one of much responsibility.

Maligned by those whom he failed to consider entitled to exemption, and accused of exempting those not disabled, he has been placed between two dilemmas. If he exempted too great a proportion he was liable to censure from his official superiors. If the number of exempted men was small, the community accused him of forcing cripples and men at the point of death into the army. Should he reject a large per cent. of substitutes or recruits, the district, being anxious to fill the quota and thus escape the draft, accused him of being hypercritical in his examinations, and said that he rejected able-bodied men.

On the other hand, he was liable, not only to official censure in case he accepted disabled substitutes and recruits, but his pay was liable to be stopped, and all expenses attending the enlistment of the disabled man deducted therefrom.

His position being then one by no means enviable, it is a matter of no little surprise that the services of medical gentlemen of such ability in their profession were secured or retained.

I would recommend, instead of the present method of appointing surgeons of boards of enrolment, that they be supplied by detail of those medical officers in the service who, by experience and talent, are evidently fitted for the position. I would also suggest that they have, while serving on boards of enrolment, the rank, pay, and emoluments of surgeons in the army.

Should this be found impracticable, I would recommend that surgeons of boards of enrolment be appointed and commissioned as such only after due and careful examination as to their ability to perform the duties pertaining to the position, and that they have the rank, pay, and emoluments of surgeons in the army.

It is also important that they be stationed in other States and districts than those in which they reside, and that their stations be changed at least once in six months, or after the completion of each draft.

This would obviate the great difficulty with which surgeons of boards of enrolment have had to contend, viz: the pressure of sectional feelings, and their being stationed where a proper discharge of duties would not interfere with their future professional prospects or their individual feelings.

There also should be detailed upon the staff of each acting assistant provost marshal general a commissioned medical officer of experience and ability, to act as medical inspector, and, under the direction of such acting assistant provost marshal general, to have supervision of all medical matters pertaining to boards of enrolment in the State or division to which he may be assigned.

Such medical officer should examine and forward all medical reports of surgeons of boards, and report at least monthly the result of his labors. He should be guided in his decisions by the regulations of this bureau, and by such other instructions as might be sent him by order of the Provost Marshal General.

The detail of such an officer would obviate many of the difficulties which have been encountered in the past experience of this bureau.

MEDICAL BOARDS OF RE-EXAMINATION AND RENDEZVOUS CAMPS.

I am convinced that no little injustice has been done surgeons of boards of enrolment by medical boards of re-examination at rendezvous camps. Surgeons of boards of enrolment, for instance, decided not to exempt drafted men with whom they were personally acquainted, and knew that there existed no physical or mental disability sufficient to entitle them to exemption. Yet, upon the arrival of these men at rendezvous camps, their representations of physical unfitness appeared so well founded that the boards of re-examination, although perfect strangers to the applicants, have recommended the men for discharge and reported the surgeon of the board as negligent in the discharge of his duty.

This has also been the case with recruits and substitutes who received large bounties, and on their arrival at rendezvous camps feigned or produced such disabilities as to secure their discharge.

This has been a subject of much complaint from surgeons of boards who have produced evidence in particular cases of this kind to prove their complaints well-grounded. Circular No. 15, Adjutant General's office, 1865, corrects this difficulty, but, unfortunately, it was issued but a few days before all drafting and recruiting were stopped.

It will, however, be a matter of great importance to the interest of the service, should any future recruitment of the army become necessary by draft or through boards of enrolment, that the requirements of this circular be strictly observed and carried into effect, viz:

Circular No. 15.

WAR DEPARTMENT, •ADJUTANT GENERAL'S OFFICE,
Washington, April 7, 1865.

I. With a view to fix the responsibility of receiving into service recruits, substitutes, drafted men, &c., who at the time of entry into service are incapable of performing the duties of a soldier, on the proper mustering and recruiting officers and examining surgeons, and to prevent the improper discharge of persons on the ground of disability contracted before entry into service, the Secretary of War directs that all enlisted men who appear to be fit subjects for discharge, on account of disability *existing at the time of entry into service*, be not discharged until they shall have been sent to such United States general hospitals as the Surgeon General may designate for the reception of this class of patients, where, after thorough treatment and observation, they will be disposed of on the recommendation of boards to be designated by the Surgeon General for that purpose.

II. The Secretary of War also directs that the chief medical officer, under the Provost Marshal General, shall have an opportunity to make such observation and examination of this class of patients, together with the surgeons who examined them on their entry into service, as may be necessary to inculcate or exculpate the mustering and recruiting officers and examining surgeons.

E. D. TOWNSEND,
Assistant Adjutant General.

Official :

SAM'L BRECK,
Assistant Adjutant General.

IMPORTANCE AND EXTENT OF RECORDS ON FILE IN THIS BRANCH.

The final reports of surgeons of boards of enrolment give the medical results of the examination of 605,045 drafted men who were examined during the progress of the several drafts, exhibiting the distinct diseases for which these men were found unfit for military service.

A grand total of the drafted men examined and exempted is as follows:

Drafted men examined.....	605,045
Drafted men exempted for physical or mental disability.....	155,730
Ratio exempted per 1,000 examined.....	257.38

There are also, in addition to the above records on file in this branch of your bureau, monthly medical reports, giving the minute medical examination, including name, age, nativity, occupation, height, chest measurement at inspiration and expiration, complexion, color of eyes and hair, white or colored, married or single, physique, and result of examination of 508,735 recruits, substitutes, drafted, and enrolled men, and the reports of boards of examination, showing the disabilities for which enlisted men were recommended for transfer to the Veteran Reserve Corps.

In addition to the statistical records already enumerated, able and valuable reports have been received from surgeons of boards of enrolment, giving, as the result of their experience, information upon the following subjects:

1st. Experience in the examination of men for military service, and number examined.

2d. General geographical description of congressional district, with prevalent diseases and causes conducive thereto; character of its inhabitants, their modes of life and occupations.

3d. Reasons why any particular diseases or disabilities have disqualified a greater ratio per thousand from military service.

4th. Views in reference to the list of disqualifying diseases and disabilities, as given in the Revised Regulations, Provost Marshal General's bureau, and what changes recommended.

5th. Statement in minute detail of method of examining men for military service.

6th. The number of men that can be physically examined per day with accuracy.

7th. Frauds most to be guarded against, which are practiced by drafted and enrolled men to escape, and by substitutes and recruits to enter the service, and other obstacles contended with in the discharge of duties, with suggestions as to the best method of avoiding or overcoming these difficulties in future.

8th. What nationality presents the greatest physical aptitude for military service.

9th. Experience as to the physical qualifications of the colored race for military service.

10th. Views as to the operation of the enrolment law as it now exists, with recommendations and suggestions thereto.

These reports cover two thousand pages in manuscript, and have evidently been carefully prepared, and the important information and useful suggestions contained therein are of great interest and value, not only to the medical profession of our own, but to that of other nations.

From all this data much important medico-scientific information can be deduced, not only in reference to the natives of this country, but of many others.

More than fifty different nativities are included among these records of the examination of men for the army.

Of the most important questions which can be discussed, I would mention the following:

1st. The physical condition of each State or congressional district of the United States.

2d. The prevalence of certain diseases and causes conducive thereto in any section of the United States.

3d. Influence of geographical situation on disease, as climate, hydrological condition, geological formation.

4th. Influence of occupation on disease.

5th. Influence of age on disease.

6th. Influence of height on disease.

7th. Influence of temperament.

8th. Influence of marriage on disease.

9th. What nationality presents the greatest physical aptitude for military service.

10th. Physical qualifications of the colored race for military service.

11th. Frauds practiced by drafted and enrolled men to escape, and by recruits and substitutes to enter military service, and the best method of detecting, avoiding, or overcoming these difficulties in future.

12th. Height of the inhabitants of each congressional district in the United States; the average height in each State and in the United States; also the same information in regard to each of the different nativities.

13th. The chest measurement of the inhabitants of each congressional district in the United States; the average in each State and in the United States; also the same information in reference to each of the different nativities.

14th. Comparison between mental and physical diseases.

15th. Practical experiences and suggestions.

16th. Medical statistics of the Veteran Reserve Corps.

It will be observed that the tables presented with this report relate only to the prevalence of certain diseases in each congressional district of the United States, in each State, and in the United States; the number of drafted men, recruits and substitutes examined, and number exempted, together with ratio exempted per thousand examined; the more minute discussion of the subject being impossible for want of time.

Of the importance of the information to be derived from the records on file in this branch of your bureau, I need not speak in extenso.

The medical records of foreign countries relate only to the natives of those particular countries, and do not equal in extent or minuteness those on file in this branch.

The medical reports of recruiting the armies of Great Britain treat almost exclusively of Englishmen, Irishmen, and Scotchmen, from whom those armies are recruited.

Reports of conscription in France and Belgium relate to the natives of those countries alone.

Our own country containing numerous representatives of all other nations, presents the rare opportunity of comparing the physical condition and aptitude for military service of nearly every nation in the world, for, among the recruits and substitutes nearly all nations were represented.

The medico-military history of this country may properly be divided into three divisions:

1st. The physical aptitude of the entire nation for military service, and the character and degree of frequency of disqualifying diseases among its inhabitants of military ages.

2d. The disqualifying causes which render unfit for military service that comparatively small portion of the nation who have entered the army.

3d. The records of that still smaller portion who, having been disabled in military service, have been discharged therefrom.

In the medical branch of your bureau are filed medical records relating to the physical aptitude of this nation for military service.

The important and highly interesting medical records, showing in what way *the soldier* has been disabled, are on file in the Surgeon General's office, and when published will doubtless present to the world highly scientific medical results never before equalled in reference to the hygiene of armies.

The Pension Bureau contains the records of those who, having been discharged from service on account of wounds or diseases, return to civil life.

The important question relating to the physical aptitude of the colored race for military service, can be discussed, as also the question as to whether the colored race are more subject to any particular diseases than the white race.

From the result of all these data and experience thus gained fixed rules can be deduced for the government of future recruiting. For example: the relation of weight to height; the relation of chest circumference to height and weight; the relation of height, chest measurement and weight to age.

The health statistics of this nation can now from these records be to a very great extent made known, and medical questions of great importance, in reference to the beneficial effect of different sections of the United States on disease, or the effect of occupation thereon, be ascertained and made public.

PREFACE TO TABLES.

In presenting the following tables, I have the honor to call your attention to the fact that they are submitted without comment. The period of time which has elapsed since the organization of this branch of your bureau has scarcely permitted the completion of tabular views of the prevalence of disease. In order to carry out the original plan, it would require another year at least, in which to finish the report. All of those questions which have been referred to, in speaking of the extent and value of the records on file here, remain untouched, or have been made the subjects of such incomplete investigation as will preclude the opinions that may have been formed from admission into this report.

It is scarcely necessary, now that the attention of the world has been so generally directed to the subject of vital statistics, to insist upon the importance of data more comprehensive and extensive than any other government has as yet collected.

It is beyond dispute that these tables exhibit a more complete view of the physical condition of this nation than has been heretofore compiled; and it is not unreasonable to expect that when they shall have been more completely discussed, they will be found to throw light upon the *causes* of many of the more common diseases to which mankind are subject.

The only condition under which any researches of this nature can aspire to a true scientific value is that in which the investigator, proceeding from the observation of phenomena, arrives finally at the laws regulating their manifestation. Whether this could be done in the case of these records has not been tried by the test of experience. It would not be premature, however, to declare that the accompanying data afford an opportunity never surpassed for the determination of the truth of some of the most important principles which the science of health has ascertained. This is the case, because, both on account of their magnitude and the variety of the conditions they embrace, they afford the opportunity of comparison with the varied but less extensive tables of European statisticians.

In the future elaboration of the records on file in this branch, it may be expected that the results which will be deduced will be ascertained and compared with each other.

That a series of tabular illustrations of the various conditions of race, age, height, complexion, occupation, geographical position, &c., will be presented, and an explanation of them attempted, and that in the future these labors will

enable the government of the United States to publish a work more complete in its character than has yet been issued by any foreign power.

Among the questions that have been already referred to as possibly capable of solution through a more complete study of the records of this office, there are some which have not as yet attracted the attention of statistical writers. Of these, "*what nationality presents the greatest aptitude for the military service*" is the first.

In alluding to it in this preliminary report, all subsequent remarks are based solely upon the *opinions* expressed by the surgeons of boards of enrolment to whom the question was proposed. It is needless, then, to say that the following criticisms are not presented as demonstrable truths.

For the most part these officers have given it as the result of their experience, that the physical, moral and intellectual characteristics of the American gave him the precedence over other nations in respect to his fitness for war. A smaller proportion have recorded their opinion in favor of the Germans. Still fewer decide for the Irish; one or two for the English and Scotch.

It is believed that, from its nature, this point is one which it will be exceedingly difficult if not impossible to determine *definitely*.

For this opinion several reasons may be assigned. Among these, it might be urged that the data upon which a decision must be founded embrace not the nations (whatever they may be) with which the comparison is made, but that portion residing in this country—not, perhaps, the best specimens of the race, and men who certainly have experienced or are in the transition state of those multifarious modifying influences known under the generic term of acclimation.

It has been frequently asserted (and not without foundation in history for the remark) that, *ceteris paribus*, all first-class nations excel their enemies upon their own soil. However this may be, it would afford a ground for the opinions expressed by the great majority of the surgeons, that, because of his physique, *clan*, and intelligence, the American was the best type of the soldier on this continent.

The last subject to which I shall refer in these concluding remarks is embraced in the question concerning the "physical qualifications of the colored race for military service."

In reference to this question, which, in order that it may be properly decided, involves a comparison between the two most widely different types of mankind, viz., the Caucasian and the negro, a few prefatory remarks can alone be presented. The materials which would enable us to discuss this subject more fully exist, but, as was before said, no time has been permitted for their elaboration.

A sufficiently careful investigation, however, of the vital statistics relating to negro substitutes and recruits, has already been made to enable me to say, that when they shall have been tabulated, the conclusions at which ethnologists have arrived in regard to the typical physical characteristics of the race will be found to be borne out in all important particulars. Excluding all hypotheses concerning the origin and permanence of type, and solely basing these criticisms upon the data which we possess, it may also be proper to say that, according to the information we have been able to obtain, it may be doubted whether the moral idiosyncracies which anatomists have founded upon their peculiarities of structure can be shown to exist to so great a degree as most anthropologists have supposed.

That the organization of the negro differs from that of any other of the great races of men, no one, perhaps, will be hardy enough to dispute; but that this difference, and those anatomical peculiarities that form the contrast between this and other types, involve an unfitness for the service, does not appear to be the case. A study of the opinions expressed by 115 surgeons engaged in the examination of both black and white recruits and substitutes goes to substantiate an idea which is common among ethnological authorities, viz., that no race is

equally adapted to all circumstances of life, that mankind obey the same general laws that govern the distribution of flora and fauna upon the earth, and that the isothermes between which are limited the health and development of the negro do not comprehend less space upon its surface than those within which the others are confined.

It may be confidently affirmed that the statistics of this office which refer principally to physico-geographical influences and to the effects of the intermixture of blood upon the negro, when taken in connexion with those parts of the Surgeon General's forthcoming report, in which he is regarded as amenable to the vicissitudes of war, will form a more complete and reliable physical history of this race than exists at this time.

It would not be in accordance with the plan of this report to enter upon a discussion of the comparative aptitude for military service exhibited by the two types of mankind of which I have been speaking, without the accompanying tables as evidence of the data upon which my opinions were based.

It appears, however, that, of the surgeons of boards of enrolment, five have given their opinion that the negro recruits and substitutes examined by them were physically a better class of men than the whites; nineteen, that they were equal; two, that they were inferior. A favorable opinion as to their fitness for the army is expressed by seventeen; a doubtful one because of insufficient data on which to ground the decision by forty-three; an unfavorable opinion by nine, and by twenty a statement of not having come to any conclusion upon the subject.

The question of the prevalence of disease among the negro inhabitants of different sections of the country is one upon which at present no specific opinion can be expressed. As in the case of the white race, it may be shown hereafter that their maladies conform to those general principles which have been heretofore established. The discussion of the physical characteristics of the negro, as involving the propriety of his use in war, only belongs to this department. It is difficult, and, in the present state of science, most uncertain, to erect upon any general characteristics of organization anything but the most general rules concerning the effect of that structure upon the moral and intellectual nature. It may be said, however, that there are not more instances of disqualifying causes of this nature among the negroes, in proportion to the numbers examined, than are to be found in the records of exemption among the white race.

A resumé of the points upon which the completed results of the statistics of this bureau may be expected to bear will comprehend the physical history of all recruits and substitutes of this race, viz: the height, age, weight, capacity of chest, health, &c. In the form of tables, the comparison of equal numbers of both races will be made, exhibiting the resemblance or contrast between the two, and their approach towards the ascertained standard of physical perfection; the effect of climatic causes upon the race, as evinced by the prevalence of disqualifying diseases in different localities; also the results of the intermixture of the races, as shown by the comparative healthfulness of the pure negro and the mulatto, as well as the most common infirmities to which both are subject; the moral status of the races, as far as disqualifying conditions are shown to result from infractions of the prevailing laws of propriety and temperance, &c.

The foregoing comprehend, perhaps, all the points which belong to the province of the statistician and physician to determine, but it is plain how much will be accomplished for the physical history of mankind when these results shall have been made known with those already referred to in the archives of the Surgeon General's office.

The historical and political significance of such a work addresses itself to the reason without the necessity of an explanation. But, in conclusion, it might not be inappropriate to say, that whatever the exigencies of the state may be, there are laws of the natural world which heretofore, and in all conceivable conditions, have and must supersede the legislation of mankind.

To utilize and control successfully any animal, it is indispensable to know the vital and physical necessities of his being; not less so in the government of men.

The physical history of a race illuminates not only the past, but the future, and is alike indispensable to those whose profession it is to superintend the phenomena of the body or the mind. No rational expectation can be entertained that the accidents of legislation can be eliminated until the knowledge of those laws which inevitably sway the destinies of the world are known, and no hope exists that the history of races can have other than an empirical value unless the causes which produce their idiosyncracies can be ascertained.

It is not only in these departments that accuracy is to be expected to attend the completion of the physical history of humanity. It is alike applicable to the efforts of hygienic science to preserve the health of the world, and to the physician who combats the diseases of individuals. There lies hidden within this domain the nature of those occult physiological forces that preside over the growth, maturity, and decay of nations.

ENUMERATION OF TABLES.

I respectfully submit the following statistical tables, illustrative of the mental and physical disabilities occurring under the 1st, 2d, 3d, and 4th drafts made under the enrolment act, showing the number of drafted men exempted, and ratio per 1,000 of those exempted to the number examined by the several boards of enrolment, and comparing these statistics with those of foreign countries.

Tables are also given, showing the number of recruits and substitutes examined, the number rejected by surgeons of boards of enrolment, and the ratio rejected per 1,000 examined during the months of September, October, November, and December, 1864, and January, February, March, and April, 1865; in addition to which, tables giving the average height, and chest measurements at expiration and inspiration, are annexed.

These statistical tables are 158 in number, and are divided as follows:

Tables No. 1, 2, 3, 4, 5, 6 relate to the medical statistics of the first draft, under call of July, 1863, viz:

Table No. 1, showing, by congressional districts of each State, the distinct diseases and disabilities, alphabetically arranged, for which drafted men were found unfit for military service; also the total number examined, total number exempted, and the ratio exempted per 1,000 examined in each district, under the draft of 1863, (being the first draft under the enrolment act.)

Table No. 2, showing, by States, the distinct diseases and disabilities, alphabetically arranged, for which drafted men were found unfit for military service; also the total number examined, total number exempted, and the ratio exempted per 1,000 examined in each State, under the draft of 1863, (being the first draft made under the enrolment act.)

Table No. 3, showing, by congressional districts of each State, the distinct diseases and disabilities classified for which drafted men were found unfit for military service; also the total number exempted in each district, total number examined, and the ratio exempted per 1,000 examined in the United States, under the draft of 1863, (being the first draft made under the enrolment act.)

Table No. 4, showing, by States, the distinct diseases and disabilities classified for which drafted men were found unfit for military service; also the total number exempted in each State, total number examined, and ratio exempted per 1,000 examined in the United States, under the draft of 1863, (being the first draft made under the enrolment act.)

Table No. 5, showing the total number examined, the total number exempted, and the ratio exempted per 1,000 examined for each distinct disease or disability, alphabetically arranged, in the United States; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined for each

disease or disability, alphabetically arranged, in each State, under the draft of 1863, (being the first draft under the enrolment act.)

Table No. 6, showing the total number examined, the total number exempted, and the ratio exempted per 1,000 examined for each class of diseases and disabilities, in the United States; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined for each class of diseases and disabilities in each State, under the draft of 1863, (being the first draft made under the enrolment act)

Tables Nos. 7, 8, 9, 10, 11, 12 contain the medical statistics of the second draft, made for deficiencies arising under call of March 14, 1864, being the second draft under the enrolment act, as follows :

Table No. 7, showing, by congressional districts of each State, the distinct diseases and disabilities, alphabetically arranged, for which drafted men were found unfit for military service; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined in each district, under the draft made under the call of March 14, 1864, (being the second draft under the enrolment act.)

Table No. 8, showing, by States, the distinct diseases and disabilities, alphabetically arranged, for which drafted men are found unfit for military service; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined in each State, under the draft made under the call of March 14, 1864, (being the second draft made under the enrolment act.)

Table No. 9, showing, by congressional districts of each State, the distinct diseases and disabilities, classified, for which drafted men were found unfit for military service; also the total number exempted in each district, the total number examined, and the ratio exempted per 1,000 examined in the United States, under the draft made under the call of March 14, 1864, (being the second draft made under the enrolment act.)

Table No. 10, showing, by States, the distinct diseases and disabilities, classified, for which drafted men were found unfit for military service; also the total number exempted in each State, the total number examined, and the ratio exempted per 1,000 examined in the United States, under the draft made under the call of March 14, 1864, (being the second draft made under the enrolment act.)

Table No. 11, showing the total number examined, the total number exempted, and the ratio exempted per 1,000 examined for each distinct disease and disability, alphabetically arranged, in the United States; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined for each disease or disability, alphabetically arranged, in each State, under the draft made under the call of March 14, 1864, (being the second draft made under the enrolment act.)

Table No. 12, showing the total number examined, the total number exempted, and the ratio exempted per 1,000 examined, for each class of diseases and disabilities, in the United States; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined, for each class of diseases and disabilities, in each State, under the draft made under the call of March 14, 1864, (being the second draft made under the enrolment act.)

Tables Nos. 13, 14, 15, 16, 17, and 18 present the medical statistics of the third draft, made under call of July 18, 1864, and contain the following data :

Table No. 13, showing, by congressional districts of each State, the distinct diseases and disabilities, alphabetically arranged, for which drafted men were found unfit for military service; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined in each district, under the draft made under the call of July 18, 1864, (being the third draft made under the enrolment act.)

Table No. 14, showing, by States, the distinct diseases and disabilities, alphabetically arranged, for which drafted men were found unfit for military ser-

vice; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined in each State, under the draft made under the call of July 18, 1864, (being the third draft made under the enrolment act.)

Table No. 15, showing, by congressional districts of each State, the distinct diseases and disabilities, classified, for which drafted men were found unfit for military service; also the total number exempted in each district, the total number examined, and the ratio exempted per 1,000 examined in the United States, under the draft made under the call of July 18, 1864, (being the third draft made under the enrolment act.)

Table No. 16, showing, by States, the distinct diseases and disabilities, classified, for which drafted men were found unfit for military service; also the total number exempted in each State, the total number examined, and the ratio exempted per 1,000 examined in the United States, under the draft made under the call of July 18, 1864, (being the third draft made under the enrolment act.)

Table No. 17, showing the total number examined, the total number exempted, and the ratio exempted per 1,000 examined for each distinct disease or disability, alphabetically arranged, in the United States; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined for each disease or disability, alphabetically arranged, in each State, under the draft made under the call of July 18, 1864, (being the third draft made under the enrolment act.)

Table No. 18, showing the total number examined, the total number exempted, and the ratio exempted per 1,000 examined for each class of diseases and disabilities in the United States; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined for each class of diseases and disabilities in each State, under the draft made under the call of July 18, 1864, (being the third draft made under the enrolment act.)

Tables Nos. 19, 20, 21, 22, 23, and 24 relate to the fourth draft made under the call of December 19, 1864, and give the following information:

Table No. 19, showing, by congressional districts of each State, the distinct diseases and disabilities, alphabetically arranged, for which drafted men were found unfit for military service; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined in each district, under the draft made under the call of December 19, 1864, (being the fourth draft made under the enrolment act.)

Table No. 20, showing, by States, the distinct diseases and disabilities, alphabetically arranged, for which drafted men were found unfit for military service; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined in each State, under the draft made under the call of December 19, 1864, (being the fourth draft made under the enrolment act.)

Table No. 21, showing, by congressional districts of each State, the distinct diseases and disabilities, classified, for which drafted men were found unfit for military service; also the total number exempted in each district, the total number examined, and the ratio exempted per 1,000 examined in the United States, under the draft made under the call of December 19, 1864, (being the fourth draft made under the enrolment act.)

Table No. 22, showing, by States, the distinct diseases and disabilities, classified, for which drafted men were found unfit for military service; also the total number exempted in each State, the total number examined, and the ratio exempted per 1,000 examined in the United States, under the draft made under the call of December 19, 1864, (being the fourth draft made under the enrolment act.)

Table No. 23, showing the total number exempted, the total number examined, and the ratio exempted per 1,000 examined for each distinct disease and disability, alphabetically arranged, in the United States; also the total number exempted, the total number examined, and the ratio exempted per

1,000 examined for each distinct disease and disability, alphabetically arranged, in each State, under the draft made under the call of December 19, 1864, (being the fourth draft made under the enrolment act.)

✓ Table No. 24, showing the total number exempted, the total number examined, and the ratio exempted per 1,000 examined for each class of diseases and disabilities in the United States; also the total number exempted, the total number examined, and the ratio exempted per 1,000 examined in each State, under the draft made under the call of December 19, 1864, (being the fourth draft made under the enrolment act.)

In tables Nos. 25, 26, 27, and 28 will be found the consolidated medical results of all the drafts made under the enrolment act, and from these tables may be learned the following statistical information:

Table No. 25, showing, by States, the distinct diseases and disabilities alphabetically arranged, for which drafted men were found unfit for military service; also the total number examined, the total number exempted, and the ratio exempted per 1,000 examined in each State, under all the drafts made under the enrolment act.

Table No. 26, showing by States the distinct diseases and disabilities classified for which drafted men were found unfit for military service; also the total number exempted in each State, the total number examined, and the ratio exempted per 1,000 examined in the United States, under all the drafts made under the enrolment act.

Table No. 27, showing the total number exempted, the total number examined, and the ratio exempted per 1,000 examined for each distinct disease and disability, alphabetically arranged, in the United States; also the total number exempted, the total number examined, and the ratio exempted per 1,000 examined for each disease and disability in each State, under all the drafts made under the enrolment act.

✓ Table No. 28, showing the total number exempted, the total number examined, and the ratio exempted per 1,000 examined for each class of diseases and disabilities in the United States; also the total number exempted, the total number examined, and the ratio exempted per 1,000 examined in each State, under all the drafts made under the enrolment act.

The tables from No. 29 to No. 140, inclusive, exhibit by angular lines the prevalence of diseases and disabilities for which drafted men were exempted under all drafts, and are given for the purpose of facilitating the study of table No. 27, and render unnecessary a minute examination and comparison with each other of the ratios indicating the prevalence of diseases in each State and the United States.

Tables Nos. 141, 142, 143, 144, and 145 show the number of recruits examined and rejected for physical or mental disabilities in the following manner:

Table No. 141, showing, by congressional districts of each State, the distinct diseases and disabilities, alphabetically arranged, for which recruits were found unfit for service; also the total number examined, total number rejected, and the ratio rejected per 1,000 examined in each district, for the months of September, October, November, and December, 1864, and January, February, March, and April, 1865.

Table No. 142, showing, by States, the distinct diseases and disabilities, alphabetically arranged, for which recruits were found unfit for service; also the total number examined, the total number rejected, and the ratio rejected per 1,000 examined in each State, for the months of September, October, November, and December, 1864, and January, February, March, and April, 1865.

Table No. 143, showing, by congressional districts of each State, the distinct diseases and disabilities, classified, for which recruits were found unfit for service; also the total number rejected in each district, total number examined, and the ratio rejected per 1,000 examined in the United States, for the months of Sep-

tember, October, November, and December, 1864, and January, February, March, and April, 1865.

Table No. 144, showing by States the distinct diseases and disabilities, classified, for which recruits were found unfit for service; also the total number rejected in each State, total number examined, and ratio rejected per 1,000 examined in the United States, for the months of September, October, November, and December, 1864, and January, February, March, and April, 1865.

Table No. 145, showing the total number of recruits examined, the total number rejected, and the ratio rejected per 1,000 examined for each distinct disease or disability, alphabetically arranged, in the United States; also the total number examined, the total number rejected, and the ratio rejected per 1,000 examined for each disease or disability, alphabetically arranged, in each State, for the months of September, October, November, and December, 1864, and January, February, March, and April, 1865.

In the same manner as in the case of recruits, tables Nos. 146, 147, 148, 149, and 150 illustrate the medical results of the examination of substitutes.

Table No. 146, showing, by congressional districts of each State, the distinct diseases and disabilities, alphabetically arranged, for which substitutes were found unfit for service; also the total number examined, total number rejected, and the ratio rejected per 1,000 examined in each district, for the months of September, October, November, and December, 1864, and January, February, March, and April, 1865.

Table No. 147, showing, by States, the distinct diseases and disabilities, alphabetically arranged, for which substitutes were found unfit for service; also the total number examined, total number rejected, and the ratio rejected per 1,000 examined in each State, for the months of September, October, November, and December, 1864, and January, February, March, and April, 1865.

Table No. 148, showing, by congressional districts of each State, the distinct diseases and disabilities, classified, for which substitutes were found unfit for service; also the total number rejected in each district, total number examined, and the ratio rejected per 1,000 examined in the United States, for the months of September, October, November, and December, 1864, and January, February, March, and April, 1865.

Table No. 149, showing, by States, the distinct diseases and disabilities, classified, for which substitutes were found unfit for service; also the total number rejected in each State, total number examined, and ratio rejected per 1,000 examined in the United States, for the months of September, October, November, and December, 1864, and January, February, March, and April, 1865.

Table No. 150, showing the total number of substitutes examined, the total number rejected, and the ratio rejected per 1,000 examined for each distinct disease or disability, alphabetically arranged, in the United States; also the total number examined, the total number rejected, and the ratio rejected per 1,000 examined for each disease or disability, alphabetically arranged, in each State, for the months of September, October, November, and December, 1864, and January, February, March, and April, 1865.

Tables Nos. 151, 152, 153, 154 and 155, have been compiled from the latest statistical records that could be obtained of Great Britain, France, and Belgium, and are given for the purpose of comparison with like statistics of the United States.

Table No. 151, showing the causes of rejection of the recruits found unfit for service at the headquarters of each of the recruiting districts in Great Britain, in the ten years from April 1, 1842, to March 31, 1852.

Table No. 152, showing the number of young men exempted from military service on account of physical unfitness, in France, in each year from 1831 to 1843, inclusive, and specifying the various causes of exemption. (Compiled from the "Comptes Rendus au Roi sur le Recrutement de l'Armée.")

Table No. 153, showing the number of enrolled militia and different causes of exemption during the period of five years from 1851 to 1855, in each of the provinces of Belgium. (Document Statistiques publiés par le Ministre de l'Intérieur: Bruxelles, 1857.)

Table No. 154, showing the number of recruits examined, the number rejected for physical and mental disability, and the ratio rejected per 1,000 examined in Great Britain, for each year from 1832 to 1851, and from 1860 to 1862, inclusive; also, giving the total examinations, total rejections for physical and mental disability, and the ratio per 1,000 rejected.

Table No. 155, showing the number of young men examined, number exempted for physical and mental disability, and the ratio per 1,000 exempted, in France, in each year from 1831 to 1843, inclusive. (Compiled from the "Comptes Rendus au Roi sur le Recrutement de l'Armée.")

Table No. 156, showing the ratios of exemptions or rejections from military service for mental and physical infirmities in the United States, France, Great Britain, and Belgium.

Table No. 157, showing by *nationalities* the average height and chest measurements at expiration and inspiration of 340,179 drafted men, recruits, and substitutes examined by the several boards of enrolment of the United States for military service.

Table No. 158, showing by *States* the average height and chest measurements at expiration and inspiration of 233,806 drafted men, recruits, and substitutes, natives of the United States, examined for military service.

In preparing the statistical tables of height and chest measurement it is to be regretted that sufficient time was not permitted in which to compile them in the more preferable and scientific manner which is now adopted by statisticians, viz: the number examined of each nationality of each particular height or chest measurement. It is, however, believed that they will be of interest and practical value in the form in which they are presented.

In conclusion, I have the honor to state that some discrepancy will be observed in the results of the number examined and exempted, given in the tables herewith submitted, and those submitted by the enrolment branch of your bureau. It does not, however, materially affect the ratio of exemptions, and arises from the fact that, in a few cases, later returns have been received by the enrolment branch than those on file in this office.

In a few districts the reports are not incorporated in the tables presented, on account of being imperfect.

The ratio exempted for physical or mental disability per thousand examined in the fourth draft may seem disproportionately small when compared with the results of the other drafts. In the fourth draft many men who reported to boards of enrolment were discharged by the order discontinuing recruiting and drafting, and although they are counted in the total examined by the board, yet numbers who would probably have been exempted for physical disabilities were not examined by the surgeon, such examination being unnecessary, as the drafted men were discharged by the order above cited.

It is respectfully submitted, that the valuable and interesting information contained in the reports and records on file in this branch of your bureau should not be lost, and that it would be not only of interest, but scientific importance, that minute results deduced therefrom should be made public.

I have the honor to be, general, very respectfully, your obedient servant,

J. H. BAXTER,

Surgeon and Bt. Col. U. S. Vols., and Chief Medical Officer
Provost Marshal General's Bureau.

TABLE No. 1.—Showing, by congressional districts of each State, the distinct diseases and disabilities, alphabetically arranged, for which drafted men were found unfit for military service; also the total number examined, total number exempted, and the ratio exempted, per 1,000 examined in each district, under the draft of 1863, (being the first draft under the enrolment act.)

[No draft took place under this call in States not mentioned.]

States.	District.	Arteries, large, aneurism of.	Abdomen, grossly protuberant.	Anus, artificial.	Ani, prolapsus.	Ano, fistula in, extensive or complicated.	Arm, loss of.	Brain, acute disease of. TABLE No. 8.—*Showing, by States, the distinct diseases and disabilities, alphabetically arranged, for which drafted men were found unfit for military service; also the total number examined, total number exempted, and the ratio exempted, per 1,000 examined in each State, under the draft made under the call of March 14, 1864, (being the second draft made under the enrolment act.)*

States.	Arteries, large, aneurism of.	Anus, artificial.	Ani, prolapsus.	Apo, fistula in, extensive or complicated.	Bones of face, caries of.	Bladder, stone in.	Burns, muscular contraction from.	Burns, cutaneous contraction from.	Bones, chronic disease of.	(Chorea.	Cancer.	Cheek, extensive loss of substance of.	Chest, excessive deformity of.	Disability, permanent physical.	Deafness, decided.	Dumbness.	Epilepsy.	Eye, right, total loss of sight of.	Eye, right, cataract of.	Eye, right, loss of crystalline lens of.	Eyes, both, partial loss of sight of.	Eyes, serious permanent disease of.	Eyelids, serious permanent disease of.	Erysipelas.	Extremities, lower, varicose veins of.	Extremities, lower, cleaviness of, extensive, deep, and adherent.

Alphabetical list of diseases and disabilities.

Syphilis, secondary.....
 Stammering, excessive and confirmed.....
 Spine, excessive curvature of.....
 Spine, caries of.....
 Stomach, caries of.....
 Stomach, confirmed or malignant.....
 Tuberculosis, developed.....
 Tongue, total loss of.....
 Tongue, hypertrophy of.....
 Tongue, atrophy of.....
 Tongue, mutilation of.....
 Tongue, chronic ulceration of.....
 Teeth, loss of.....
 Trachea, fistula of.....
 Torticollis.....
 Thumb, right, total loss of.....
 Thumb, right, loss of ungual phalanx of.....
 Toe, great, total loss of.....
 Tumors.....
 Urethra, organic stricture of.....
 Uterus, chronic.....
 Voice, permanent loss of.....
 Wounds.....
 Wounds, muscular contraction from.....
 Wounds, cutaneous contraction from.....

	15	74	2	1.18	96	3.38	1	17	12	77	3	2.46	7	2.24
Limb, paralysis of.....	55	2.70	1	.59	1	.13	12	2.00	51	3.29	7	5.74	2	.64
Limb, atrophy of.....														
Nose, total loss of.....														
Nose, deformity of.....														
Neck, wounds of.....	4	.20			3	.39			5	.32			1	.32
Neck, tumors of.....	2	.10			3	.32			1	.06			3	.06
Ozæna, dependent on caries in progress.....	9	.45	1	.59	4	.65	6	1.00					4	1.38
Otorrhœa, chronic purulent.....	14	.69	1	.59	5	.78			12	.77			1	.32
Paralysis.....	23	1.13	1	.59	6	.65	4	.17	5	.32			1	.32
Palate, cleft (hony).....	7	.35			5	.65	1	.17					1	.32
Palate, total or nearly total loss of.....	1	.05												
Rhitis, caries of.....														
Rhitis, stricture of.....														
Rheumatism, chronic.....	100	4.92	8	4.72	21	2.73	15	2.49	37	3.67	15	12.31	32	10.24
Skin, inveterate and extensive disease of.....	26	1.37	2	1.18	13	1.68	4	.67	19	1.22	4	3.28	6	1.92
